

Vaydeesh Desai

Boston, MA 02115 | (872) 867-2820 | Desai.vay@northeastern.edu | linkedin.com/in/vaydeesh-desai | github.com/vaydeeshdesai
Co-op Availability: July – December 2026

Education

Northeastern University, Khoury College of Computer Science

Boston, MA

Candidate for B.S. in Computer Science and Business Administration

September 2024 – May 2028

Concentration in Finance

GPA: 3.93/4.0 | Dean's List

Relevant Coursework: Program Design & Implementation I–II, Discrete Structures, Foundations of Data Science, Introduction to Mathematical Reasoning, Financial Accounting & Reporting, Principles of Microeconomics, Principles of Macroeconomics.

Skills

Languages & Frameworks: Python, TypeScript, JavaScript, React, Next.js, FastAPI, Prisma ORM, PostgreSQL, Docker, SQL

AI & Agent Frameworks: LLM Integration, Agentic Workflows, Prompt Engineering, Claude API, OpenAI API, LangChain, Retrieval Pipelines, Workflow Automation

Developer Tooling: GitHub, Vercel, RESTful APIs, Webhooks, JWT Authentication, Containerization, Google Cloud Platform

Data & Analytics: Pandas, NumPy, Matplotlib, Data Pipelines, Data Visualization, Statistical Analysis

Certifications: Analysing and Visualising Data the Google Way (Google Cloud)

Experience

VAK Sustainable Computing Lab at Northwestern University

Evanston, IL

Undergraduate Researcher

April 2025 – June 2025

- Designed and shipped embedded software components in C/C++ and Python across a 5-person team, owning modules end-to-end from prototype to field-deployable state across **50+ iterative build-and-test cycles**
- Debugged and resolved all integration failures across a multi-sensor pipeline — working fast, iterating constantly, and maintaining a bias toward shipping over perfection
- Distilled complex findings into clear documentation that kept a multidisciplinary team aligned and unblocked throughout the project

Northeastern Electric Racing

Boston, MA

Web Developer

September 2024 – December 2024

- Shipped multiple **TypeScript/React/Prisma features** on FinishLine, a developer-facing internal platform serving **100+ engineers** — translating requirements into production-ready workflows at startup pace
- Owned features from design to deployment, iterating rapidly based on real user feedback and cutting **post-deployment rework to zero** by validating requirements before writing a single line of production code

Wockhardt Hospitals Limited

Mumbai, Maharashtra

Intern

June 2023 – July 2023

- Built **10+ Python data pipelines** using Pandas and Matplotlib, processing operational datasets and delivering visualizations that surfaced actionable insights for non-technical stakeholders
- Operated in a fast-moving cross-functional environment, producing clear documentation and summaries shared across internal teams

Projects

QuantView — Portfolio Analytics & Risk Dashboard

Boston, MA

Personal Project | FastAPI, React (TypeScript), PostgreSQL, Docker, Claude API

September 2025 – January 2026

- Designed, built, and launched a **full-stack AI-powered analytics platform** from zero to deployed MVP, integrating **LLM APIs** to generate natural language risk interpretations and automate insight delivery for end users
- Built a modular retrieval pipeline ingesting **250+ daily market data points per asset**, computing **8 risk metrics** (Sharpe ratio, beta, max drawdown, 95% VaR) with ~30% latency reduction over baseline
- Containerized and deployed all three services with Docker — treating the project as open-source-ready from day one, with full architecture documentation for public handoff
- Shipped the entire platform **solo**, owning every layer: system design, API integration, frontend, deployment, and documentation

Inventory & Customer Management System (Desktop Application)

Mumbai, Maharashtra

International Baccalaureate Internal Assessment | Python, Tkinter, SQLite, OOP, Figma

August 2022 – June 2024

- Designed and shipped a fully functional desktop application from concept to MVP — **owned the full build solo**, covering authentication, **CRUD operations across 2 relational entities**, **5+ filter modes**, and a complete Figma-designed UI across **10+ screens**
- Secured **100+ simulated user records** behind a complete authentication workflow covering account creation, login validation, and password recovery, with **zero data integrity failures** in testing
- Translated **10+ distinct business requirements** into wireframed UI screens in Figma, then implemented **event-driven navigation** in Tkinter with no feature gaps between design and final build
